

Abstract

From the beginnings to multi-cavity moulds with In-Mold Label (IML).

Speaker: **Joerg Kohl**
Technical Marketing Biopolymers
BASF SE, Ludwigshafen

Abstract: Mr. Kohl accompanied the business development of compostable packaging at BASF SE from the the first step in November 2011 until today. But how did it happen? The way was not always straight and there were not only successes! Mr. Kohl has to tell a lot of little stories that describe this stony way very impressively.

Peppered with personal experiences, Mr. Kohl talks about several tests of machineries, materials and tools and provides an insight into how the pioneers thought and what the critics say. He shows vividly, how the attitude to bioplastics changed during the last years and how the demands on the products were increasing notably - beginning with the Single-cavity-mold to the fast rotating high-cavity-tool with in-mold-label.
